

XLlogger

Barometer Sensor

XLS 1016

Technical Specifications

Range: 0 – 2068 hPa (mB)

Resolution: ± 0.6 hPa (mB)

Instructions

- The Barometer sensor does not need calibrating and can be used directly with XLlogger software using the supplied USB connection lead.
- The sensor contains two chambers. One measures pressure whilst the other is vacuous, giving a linear absolute pressure response.
- Please note the sensor is designed to measure pressures around atmospheric pressure and should not be used with the syringe in an attempt to measure pressures outside this range.
